

Enterprise Business Intelligence Roadmap

HCD Solutions: Turning Information into Action

Is your organization mired with silo data reporting or business intelligence (BI) solutions that are draining your resources, while still requiring hundreds of hours of manual labor from your staff to get the information they need? Whether you are looking to consolidate these silos into an enterprise BI platform, or starting anew, HCD can put you on the path to a knowledge driven organization. Using its Enterprise BI Strategic Roadmap Development Methodology, HCD can create a strategic BI roadmap that is just right for you.

Includes:

- Documentation of the organization's enterprise intelligence 'current state'
- Infrastructure needs (tools and skills needed) to implement the enterprise BI solution including an enterprise data warehouse (EDW)
- Proposed enterprise BI 'future state'
- Proposed data governance model
- High level total cost of ownership (both to implement and to sustain the 'future state' vision)
- Proposed benefits realization model (plan to measure value achieved from enterprise BI initiative)

Approach:

Generic strategic planning frameworks are often retrofitted for enterprise business intelligence strategic planning. HCD found these generic frameworks lacking and developed the Enterprise Business Intelligence DRGS Methodology™. The Enterprise Business Intelligence DRGS Methodology™ is designed to help you plan a holistic and pragmatic approach that is grounded within the context of healthcare organizations in general and the culture of your own organization in particular.
