

Revenue Cycle Dashboard

Health Care DataWorks' Revenue Cycle dashboard presents the state of revenue management at your facility.

The dashboard provides valuable feedback to help drive strategic and tactical decisions. The hidden power of the dashboard application is its interactivity, each chart supporting drill-down reports which can be activated with a mouse click.

Drilldown reports provide additional details that help the user understand the causes of features observed on the chart "above" it. For example, the 'rejections' report can "drill down" to show how that metric performed by payer, by percent of total charges, or even by a particular physician. In this way, drill-downs can help find which entities are responsible for variations in performance on an aggregated metric.

Over 40 Distinct Indicators Including:

- Denial Write Offs Gross Revenue Percent
- Copay Volume
- Transmitted Claims by Volume
- Self Pay Collections
- Total Cash Collection
- Gross Days in AR
- Contractual Adjustments
- Charity
- Rejections
- Charges
- Late Charges
- Copay Dollars

Value:

HCD's Revenue Cycle Dashboard can be quickly implemented to provide immediate value to end users. When adopted as part of HCD's Data Warehouse Appliance, Analysts also have the ability to do ad hoc analysis across Clinical, Financial, and Operational areas.
